

MASSAGE PILLOW

The comfort you can count on
The comfort you deserve

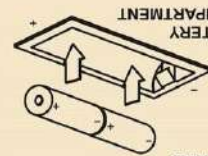

This is equipped with a plug to accept a standard 3 volt 0.5 amp AC/DC adaptor that is available from your local dealer. When you plug the adaptor cord into the pillow, the batteries are automatically disconnected. The plug-in is located on the front of the battery/vibrator unit as shown. Zip the pillow closed after you plug in the adaptor and let the wire exit at the end of the zipper. With use of an adaptor, you will need to replace the batteries less frequently.

AC/DC CONVERTER PLUG

The switch to control the choice of high or low is located on the battery/vibrator unit inside the pillow. Zip the pillow open. Do not remove the vibrator unit from the pillow. Locate the switch and slide it to the other position to change the setting from low to high or high to low. Zip the pillow closed before using.

HIGH/LOW SELECT SWITCH

RECOMMENDED USE : FOR BEST RESULTS, USE UP TO 15 MINUTES AT A TIME ... USE AS FREQUENTLY AS DESIRED.

TWO (2) "D" SIZE BATTERIES

Open the zipper on the back of the pillow. Insert two "D" batteries with Positive (+) and Negative (-) positioned as shown. After batteries are installed, zip pillow closed. You can now apply pressure to your pillow which will activate the massage action.

BATTERY INSTALLATION

- Automatic : Just Press Against!
